

ELASTIC BRACELET

1. String and design beads onto Elasticity Needle. Designing directly on the needle makes it easy to re-design until you have a design you like.
2. Fold over double the Elonga, Elasticity, or other stringing material that you need for the length of the bracelet or necklace, through the hook of the Elasticity Needle.
3. Gently pull or push the beads from the Elasticity Needle onto the Elasticity, taking care not to catch the turned portion of the hood onto any bead holes.
4. Tie a Figure 8 knot in the Elasticity to secure.

For necklaces, design the first half of the necklace on the needle, attach Elasticity, Elonga (or other stringing material) push beads onto the stringing material. Detach needle from stringing material and design the other side of the necklace on the needle, then re-attach the hook to the stringing material. Push contents of the needle onto the stringing material and connect a clasp or tie Elasticity to finish necklace

List of items used

701S-101	ELASTIC NEEDLE 10 ¾" FOR 1MM BEADS (.040")
133U-001	ELONGA 0.7MM CLEAR ELASTIC MATERIAL
	VARIOUS BEADS FOR DESIGNING
	CUBE BEAD BUMPERS FOR HOLDING DESIGN ON NEEDLE
